My website

SUMMARY

A motivated Computer Engineering student with Java, JavaScript, Python, C++, SEO and physical project experience, seeking an internship to apply and hone my technical skills. I possess great problem-solving abilities, a sharp eye for detail, and a passion for innovation. Committed to contributing to a team effort, I would like to leverage hands-on experience to thrive in real projects. Eager to learn new technologies and deliver quality work, they aspire to be a Software Engineer in the near future. What you are thinking about now is, why all AI resumes are around???, because its fucking writing better than me, so I just use it.

EXPERIENCE

Part Timer – Software Engineer
At MOTORHOME HOLIDAY AND TRAVELS SDN.BHD

March 2025 - Current

Key Responsibility:

SKILLS

IT Skills

MySQL, HTML & CSS, DBMS, JAVA, JavaScript, GitHub, C++, php, phpMyAdmin, python...etc
Software Engineering, Circuit Design, CyberSecurity, Linux, social engineering, Word press, project management, project planning.

Research and Planning

Gathering information, Identifying problems, Technical writing

Soft Skills

- Communication
- Teamwork
- Detail Oriented
- Flexibility
- Self Management
- Problem Solving

LANGUAGES

- English
- arabic

EDUCATION

MILA University, Nilai, Malaysia — *Bachelors Of Computer Engineering (Hons)*

March 2022 - Present

CGPA - 3.2/4.0

Relevant Courses:

- Data Structures and Algorithms
- Computer Networks
- Operating Systems
- OOP, AI

CERTIFICATE

Full Ethical Hacking & Penetration Testing Course | Ethical ,
at Udemy

March 2023 - June 2023

Relevant Courses:

- Ethical Intelligence
- linux
- cyber security
- network security
- bug bounty

PROJECTS

Car Search Application — *A web based tool that enables users to search for cars.*

A sophisticated web tool that allows users to browse and search for cars by their make, model, and year. This innovative application is designed using HTML, CSS, and JavaScript, and is built around a RESTful API, enabling it to efficiently retrieve car data from various sources. The application is built with a user-centric approach, ensuring an intuitive and user-friendly interface that is easy to navigate and delivers a seamless experience.

AI-Power Camera Security System (CCTV)— *This python software controls a camera systems of a institution deduct faces, ages, race of the person and the dress code then track people*

This application uses python as the main programming language to integrate different types of AI which are face deduction, age, gender, race, body deduction, while the python also can indicate the dress code of the person and give a clear picture of the face and the unique signs in the person. Local database to save the recording of the person, tracking him since he interned the institution till he exit from it. All this data is saved and can be presented through a web application with authentication function.

Automatic Drink Mixer — *This is an IOT project with an easy of use interface and direct communication with the devices .*

The project has 2 faces. First a hardware face and it's on C language coding and second a web interface face to deal with the customers. The web interface is hosted using freehosting.com with firebase. When the order is completed the program will send a php code to the arduino with a esp32 in the middle working as a wifi connection to complete the order, and with a real-time response in the drink mixing operation.
